Press Release

SOURCE: Portrush Petroleum Corporation

Portrush awaits production at Scanio-Shelton #6.

Vancouver, February 28, 2006 – Portrush Petroleum Corporation (TSX- V :PSH, OTCBB:PRRPF) (<http://www.portrushpetroleum.com>) wishes to provide an update regarding its continuing operations on the Scanio/Sheldon No.6 well in the Mission River property in Texas..

A service rig is on location. It is intended to perforate one of the hydrocarbon-bearing sandstones within the main target zone and place the well on production within the next few days. A gas flow line is being installed to connect the well-head to the gas sales line. A further announcement will be made regarding the flow rates as soon as they are available.

The Company is in discussions regarding it's involvement in a 31,000 acre tract adjacent to Mission River. The Company has also committed to drilling a well within the next few months on the Lenox field in Michigan.

About the Mission River project:

The No. 6 well has been drilled to a total depth of 10,300 feet and a decision to complete the well has been taken. The well has encountered hydrocarbon bearing sandstones within the main target zone. Preliminary results, together with an in-depth analysis of log data obtained from the well suggest that the well has discovered a gas reservoir and can be placed on production immediately. A final interpretation of the overall hydrocarbon column encountered, and hence estimated reservoir volumes and a full analysis of all the log data and fluid sampling recovered from the well is underway.

The Mission River lease is operated by McAlester and is located at the south end of the town of Refugio, Refugio County, Texas. The field has multiple pays at depths ranging from 2,000 to 8,500 feet. Portrush has a 10% working interest in the field. To date seven wells have been drilled and six wells previously drilled have been placed on production.

Potentially the most important well drilled to-date is the Scanio-Shelton No.6. This well is important because of the potential of the newly discovered reserves at deeper levels and the anticipated production volumes.

A further announcement will be made in due course regarding the hydrocarbon types encountered and the likely size of the discovery once all the data gathered from the well has been recovered and fully evaluated. This will include initial production rates. The results of this work will help determine the nature of the exploration and development program for the rest of the field.

For all future Portrush investor relations needs, investors are asked to visit the Portrush IR Hub at <http://www.agoracom.com/IR/Portrush> where they can post questions and receive answers within the same day, or simply review questions and answers posted by other investors. Alternatively, investors are able to e-mail all questions and correspondence to PSH@agoracom.com where they can also request addition to the investor e-mail list to receive all future press releases and updates in real time.
